

PRODUCT FOCUS: MULTI TASKER 250

THE CUSTOMER

VolkerRail is a service-oriented company in the fields of railway infrastructure for both, private and public companies. With its company headquarters in Doncaster, England, VolkerRail offers its services in Great Britain and Ireland.

THE TASK

VolkerRail is always looking for cost-effective solutions in track laying and track renewal that can only be offered through detailed logistic planning and maximal use of the limited working space and time. A flexible and reliable railway crane that works safely on the tracks is therefore absolutely essential.

THE CRANE

Thanks to its flexible utilisability, the Multi Tasker 250 is highly efficient working alone or in twos. The fixed counterweight and the small rear end radius together with the self-propelling allow the crane to be flexibly operated in its working environment. The interruption of the rail traffic can be reduced to a minimum. The Multi Tasker is operated by only one crane operator and one to two signalmen what keeps personnel costs low. In order to ensure the safety on the construction site, the Multi Tasker 250 is equipped with a monitor controlling all movements and data, even as with an overload protection, a preprogrammed limit monitor (boom height, slewing angle) and of course with a broad lighting systems.

WHAT THE DESIGNER SAYS

'The type 250 is a crane especially made for the laying of track sections with a length of 18 m. Well proven manual or hydraulic beams are available for hard work. The Multi Tasker 250 is moreover an excellent device for the renewal of smaller switch points.'
