

## PRODUCT FOCUS: MULTI TASKER 810

### THE CUSTOMER

The family-driven German company Hering Industrie- und Gleisbau GmbH is a specialist for railway construction. Hering offers i. a. service in the railway environment as the renewal of tracks and switches. Among its customers is also Deutsche Bahn, the German railway company. The team of Hering is experienced in operating in this special sector and has already been relying on the Multi Tasker for many years.

### THE TASK

Hering uses the Multi Tasker for track laying, track renewal and for the construction of track switch and crossing points. A very important demand on the Multi Tasker is that the traffic in the railway network can go on while the mentioned works are realized which it perfectly manages. The Multi Tasker perfectly adapts to local conditions and allows minimal cut-offs. This means maximal efficiency to Hering and its customers.

### THE CRANE

The Multi Tasker 810 offers decisive advantages as to its high working speed: lowest possible degree of interruption of the traffic on adjacent tracks and low personnel costs that considerably increase the economic efficiency. The telescopic counterweight and the thus variable rear end radius allow the Multi Tasker to work profile-free. As it only needs one track, the traffic on the adjacent track remains undisturbed. Hering is convinced by the Multi Tasker and already has several of these railway slewing cranes in operation. The Multi Tasker are reliable partners in Hering's everyday work.

### WHAT THE DESIGNER SAYS

'The Multi Tasker 810 N is a special device developed for the renewal of switches with concrete sleepers. Moreover these cranes are suitable for mounting medium-heavy bridge elements and as rescue cranes in case of average load cases. We have taken special care that the Multi Tasker 800 can be operated easily.'
