

PRODUCT FOCUS: SLAG TAURUS U 80

THE CUSTOMER

Codelco is a Chilean state-owned company and one of the biggest producers of copper worldwide. In Chuquicamata, Codelco operates the biggest surface mine in the world.

THE TASK

The slag industry plays a substantial role in the system of steel production. The big challenge is to transport the slag safely, fast and efficiently. The slag pot carriers were especially developed for the tough working conditions in steel mills.

THE TRANSPORTER

In 2010, Kirow supplied three Slag Taurus U 80 to the Codelco copper mine, Chuquicamata in Chile. With a payload of 80 tons the slag pot carriers are able to handle a large quantity of slag fast and safely. The U-Frame type is the best solution for restricted roads and low clearance heights.

WHAT THE DESIGNER SAYS

'The Slag Taurus U is an extremely robust and reliable slag pot carrier with articulated steering and patented safety system. In our high-tech products we exclusively install premium components from renowned manufacturers. With a payload ranging from 40 to 150 tons the Slag Taurus U is the perfect working equipment for the slag industry for every steel mill size. Individual solutions can be created for any requirement.'
